The thrust of this mission is to bring a better, longer life to children and families decimated with this deadly curse: *P. falciparum* Malaria. It kills one child every 30 seconds in Africa. It is the single greatest killer of young kids in Africa. So, we kill malaria in Kenya, East Africa. That is our mission. You can take part in this effort.

Kenya Kids Malaria Mission works closely with hundreds of impoverished families in rural villages to distribute powerful mosquito nets that are made with mosquito insecticide, which is non-toxic to infants and children.

These are the strongest, most long-lasting nets in the world according to experts at the World Health Organization.

Our Kenyan mission team follows up with every family that has received a net. The villagers are visited regularly to chart the nets' durability and effectiveness. We have proof of the growing numbers of children's lives saved!

KENYA KIDS MALARIA MISSION

Kenya Kids

Your gift of \$10
can save the
lives of four
children!

You can help with the distribution of powerful nets that protect children and adults.
